                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence Sequence Sequence Zequence Sequence Seq

Pred. No. is the number of results predicted by chance to have a	score greater than or equal to the score of the result being printed,	and is derived by analysis of the total score distribution.

Myosin heavy chain - fluke (Schistosoma mansoni) (fragment)
Nylternate names: surface antigen, 200K
C;Species: Schistosoma mansoni
C;Date: 22-Nov-1993 #sequence_revision 06-Sep-1996 #text_change 13-Feb-1998
C;Accession: S33068
R;Soisson, L.M.A.; Masterson, C.P.; Tom, T.D.; McNally, M.T.; Lowell, G.H.; Strand, M.A.;Reference number: A46514; MUID:9305636
A;Title: Induction of protective immunity in mice using a 62-kDa recombinant fragment A;Reference number: A46514; MUID:9305636
A;Molecule type: MRNA
A;Residues: 1-527 <SOI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI>A;COI

                                                                                                                                                                                                                                                                                         Kazi A.S., Nair C.K.K.;
"Organization of the DNAK locus of the archeabacterial halophile,
"Organization of the DNAK locus of the archeabacterial halophile,
Haloferax mediterranei.";
Submitted (JUN-1998) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: STIMULATES, JOINTLY WITH DNAJ, THE ATPASE ACTIVITY OF
DNAK HELPES TO RELEASE ADP FROM DNAK THUS ALLOWING DNAK TO RECYCLE
MORE EFFICIENTLY (BY SIMILARITY).
-!- SIMILARITY: BELONGS TO THE GRPE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     autoantigen.";

DNA Seq. 7:71-82(1997).

-!- FUNCTION: MAY PLAY AN IMPORTANT ROLE IN SPERMATOGENESIS AND/OR

This polypeptide comprises a partial sequence of Mycobacterium tuberculosis antigen Tb38-IN. It is encoded by genomic DNA isolated from a M. tuberculosis strain H37Rv genomic library using a probe derived from clone Tb38-I (see AAV44384). The invention relates to compositions and methods for diagnosing tuberculosis. It provides polypeptides (see AAW64201-W64379) comprising an antigenic portion of a soluble M. tuberculosis antigen, or an immunogenic portion of an M. tuberculosis antigen, or an immunogenic portion of polypeptides, recombinant expression vectors and transformed or pransfected host cells. Also claimed are methods and diagnostic kits for detecting M. tuberculosis infection in a patient using these polypeptides, antibodies or oligonucleotide probes and primers, for the diagnosis of tuberculosis.
This sequence represents an immunogenic portion of a soluble Mycobacterium tuberculosis (MT) antigen which can be used in a methor for inducing protective immunity against tuberculosis (TB). This sequence can be formulated into vaccins and/or pharmaceutical compositions for immunising against M. tuberculosis infection or may be used for the diagnosis of tuberculosis.

                                                                                                                                                                                                                                                                                                                ò
                                                                                       requiatory expression signals of the ESAT-6 protein as well as an open regulatory expression signals of the ESAT-6 protein as well as an open regulatory expression signals of the ESAT-6 protein as well as an open trading frame coding for an antigenic protein LHP from Mycobacterium tuberculosis. Host cells comprissing the polynuclectide are used for the recombinant expression of the protein. The recombinant polypeptide can be used as immunogens and vaccines, to protect against bacteria of the turber immunogenic proteins of the bacteria or their fragments, specifically ESAT-6; and (b) for diagnosing tuberculosis infection by detection of specific antibodies. The regulatory region present in the polynuclectide may be used to express almost any heterologous protein in mycobacteria, particularly as a fusion with polyhistidine. The two provide a synergistic increase in ability to induce a protective immune response. The present sequence represents the LHP polypeptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes polypeptides comprising an immunogenic are vaccines and fusion protein containing M. tuberculosis Aq's. Also described are vaccines and fusion protein containing M. tuberculosis Aq's. M. tuberculosis Aq's. DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions of vaccines to generate a protective or therapeutic immune response to M. tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion tuberculosis-immune subjects. AAX19249 to AAX219460 and AAX3083 to AAX39225 are used in the exemplification of the present invention.

```
This invention describes novel recombinant antigens and their encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 MAEMKTDAATLGQEAGNFERISGDLKTQIDQVESTAGSLQGQWRGAAGTAAQAAVVRFQE 60

The present sequence is that of the Mycobacterium tuberculosis MTBN4 protein. This is 1 of 8 proteins, i.e. MTBN1-8 (see AAB891842-9), encoded by 8 open reading frames (see AAA89013-42) identified as being present in the genome of M. tuberculosis but absent from the genome of the BCG strain of Mycobacterium bovis. WTBN1-8 represent reagents that are useful in discriminating between M. tuberculosis and BCG and, in particular, for diagnostic methods which discriminate between exposure of a subject to M. tuberculosis and vaccination with BCG. The invention features these MTBN polypeptides, functional fragments of them, DNA encoding them, vectors, transformed cells, and diagnostic, therapeutic, and prophylactic (vaccine) methods, including genetic vaccination methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tuberculosis; immunogenic; soluble; antigen; protective immunity; TB; vaccine; pharmaceutical; infection; diagnosis.

composed of Mycobactrium tuberculosis antigens TDRA3 (see AAW64295), composed of Mycobactrium tuberculosis antigens TDRA3 (see AAW64325), 38 kDa antigen (see AAW64364), TDS8-1 (see AAW64321) and DPEP (see AAW64322). It was produced by PCR amplification (see AAW6450-57) of the appropriate antigen DNA sequences, cloning into an expression vector, and expression in E. coli. TDF-2 can be used for serodiagnosis of tuberculosis. The invention relates to compositions and methods for diagnosing tuberculosis. It provides polypeptides (see AAW64291-W64379) comprising antigenic or liminunogenic portions of M. tuberculosis antigens, or fusion proteins, DNA sequences encoding such polypeptides, recombinant expression vectors and host cells. Also claimed are methods and diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New fusion proteins useful for diagnosis, prevention and treatment of tuberculosis -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents a recombinant Mycobacterium tuberculosis tetra-antigen fusion protein, termed TbF-2, composed of the antigens TDRa3, 39RD, Tb58-1 and DPEP. The fusion protein is expressed in host cells using a vector carrying a polynucleotide (see AA220198) comprising the 4 coding sequences. The invention provides fusion proteins (see AAY32059-71) containing at least 2 M. tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                      2 AEMKTDAATLGQEAGNFERISGDLKTQIDQVESTAGSLQGQWRGAAGTAAQAAVVRFQEA 61

This protein is used in a method for inducing protective immunity against tuberculosis (TB). This sequence can be formulated into vaccines and/or pharmaceutical compositions for immunising against M. tuberculosis infection or may be used for the diagnosis of TB.

Also described are vaccines and fusion protein containing M. tuberculosis Ag's.

M. tuberculosis Ag's, DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion by, T, B or natural killer cells and/or macrophages in tuberculosis-immune subjects. AAZ19249 to AAZ19460 and AAX39083 to

                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                    2 AEMKTDAATLGQEAGNFERISGDLKTQIDQVESTAGSLQGGWRGAAGTAAQAAVVRFQEA 61
antigens. The new fusion proteins and polynucleotides encoding them are useful as vaccines for preventing tuberculosis (claimed), for diagnosis (via in vitro assays or intradermal skin tests for detection of anti-M. tuberculosis antibodies), monitoring of disease progression, and treatment of tuberculosis. They are more effective immunogens than mixtures of the individual protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New antigens from Mycobacterium tuberculosis useful in diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           skin tests and protective or therapeutic vaccines or compositions

Also described are vaccines and fusion protein containing M. tuberculosis Ag's. DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to M. tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion tuberculosis-immune subjects. AZI2924 to AZI29460 and AAY39083 to AAX39225 are used in the exemplification of the present invention.

This invention describes novel recombinant antigens and their encoding nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2 AEMKTDAATLGQEAGNFERISGDLKTQIDQVESTAGSLQGQWRGAAGTAAQAAVVRFQEA 61

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes novel recombinant antigens and their encoding nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

```
A new immunogenic polypeptide has been developed comprising an immunogenic part of a soluble Mycobacterium tuberculosis antigen (or its variant differing only in conservative substitutions and/or ancistications). The present sequence represents a M.tuberculosis antigen, Tb38-1. The immunogenic protein, and fusion proteins containing one or more of the proteins or one of the proteins plus BSAT-6, are useful in vaccines, preferably when formulated with a non-specific adjuvant, to induce an immune response against M.tuberculosis (for treatment or prevention).
                                                                                                                                                                                                                                                                                                     New immunogenic polypeptide(s) from Mycobacterium tuberculosis - are useful in vaccines for prevention, or treatment of tuberculosis, also

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                         1 MAEMKTDAATLGQEAGNFER......VQYSRADEEQQQALSSQMGF 100
